**Milestone 1 REQUIREMENTS**

We will begin creating some of these things in class.

**QUESTIONNAIRES**

- There is no requirement for the number of questions, but be anticipating filling in the information for your stakeholder profiles and personas, (which we will cover soon)
- DO NOT VIOLATE GUIDELINES FOR QUESTIONNAIRES /scales(p118-119 in book)

**USE CASES**

- Multiple scenarios that describe all primary and alternate paths
- Include for each:
  - Diagrams
  - Flow of events

**STAKEHOLDER PROFILES**

- Create stake holder profiles for your primary stakeholder(s). (similar to the ones in the book)
- THESE SHOULD BE BASED ON THE INFORMATION THAT YOUR QUESTIONNAIRE GATHERS AND NOTHING ELSE
- You don’t have to actually get people to answer your questionnaires, but make sure you cover all the information you need for your stakeholder profiles.

**PERSONAS**

- These are based on your stakeholder profiles and questionnaires.
- Be careful not to inject information based on your own preconceptions of your users.
- “If you cannot point to a direct one-to-one relation with an observed user behavior, then that particular persona characteristic is either unnecessary or, more important, erroneous and will lead to incorrect design decisions.”

**PAPER PROTOTYPES**

- Make everything out of paper before you code anything
- PEOPLE SHOULD ACTUALLY BE ABLE TO INTERACT WITH IT (as long as you are there to play the part of the computer)
- You may take pictures/ scan the paper prototypes for turn in.
